# TUTOR'S HUB

ABSTRACT:

In this busy world searching of tutors for any language is very difficult. In order to make it simple here, we proposed an idea to find a language expert tutor through mobile application. The proposed work has the common platform where the tutor and the student can access their respective available views. In this application students can register and view the availability of the language expert based on the rating of the tutor. In this app, the students and the teachers can log in with their respective emails. Students can rate the app. The students can search for various foreign language tutors from around the world. They can contact them personally and start learning from them. This system will be helpful for students to find their tutor.
