

# PROJECT TITLE : HOME COOKING

## ABSTRACT :

My application is all about cooking service. All that a customer has to do is just book the date on which they need our service, the food they want us to cook. They have to mention their address, name, contact number, alternative contact number and email. According to their needs we will allocate our workers. All that a customer has to provide our workers with is an ingredient and the payment mode is only cash to the worker. It charges 400 for two members for veg dishes and 500 for non-veg dishes. There is no count in number of dishes. Our workers will happily and perfectly plate the customer needs. The registration will be confirmed once the customer presses okay.
